

Lesson 18.1 Skills Practice

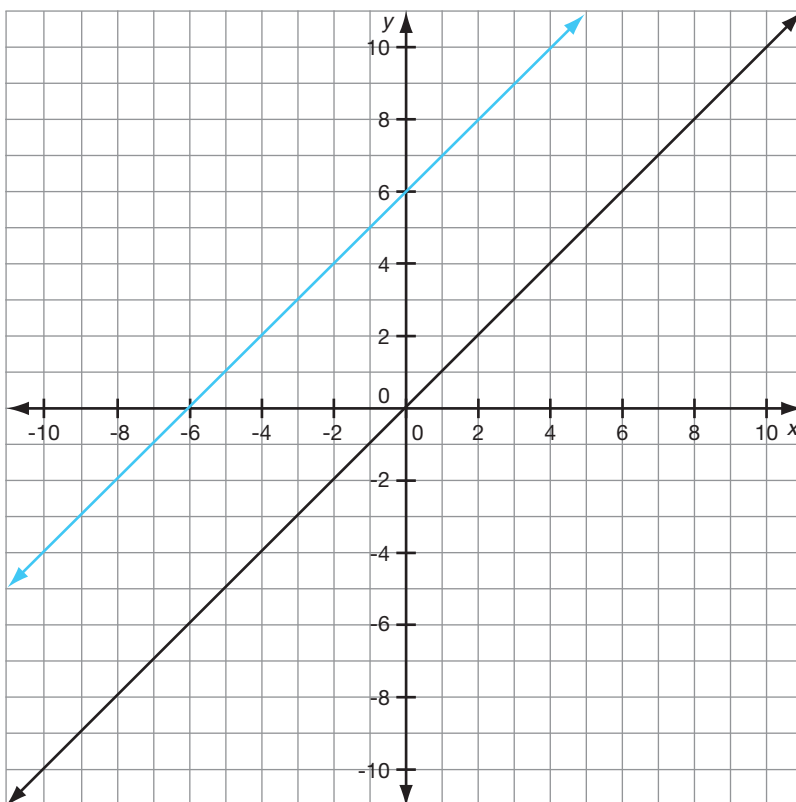

NAME _____ DATE _____

Sliding Lines Translations of Linear Functions

Problem Set

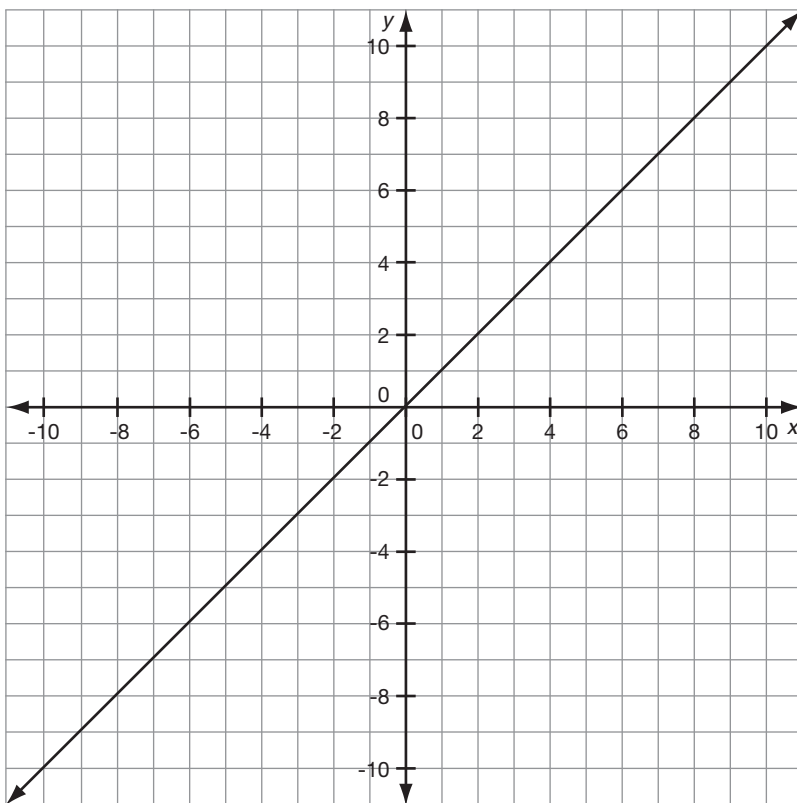

Translate each graph. Graph the translation and write an equation to represent the translation.

1. Translate the graph of $y = x$ up 6 units. Graph the translation and write an equation to represent the translation.

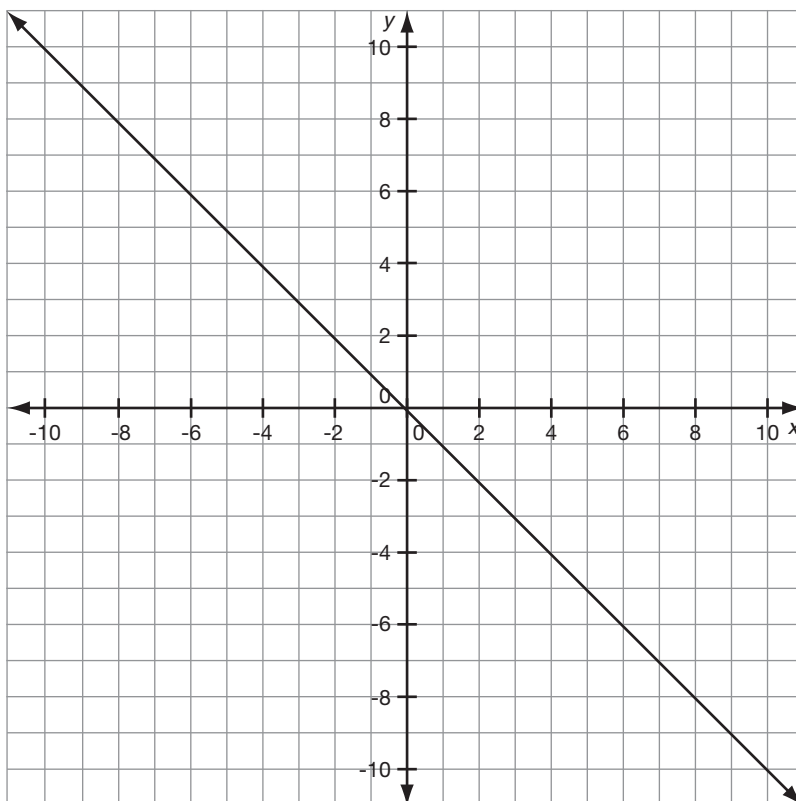

$y = x + 6$ or $x = y - 6$

- Translate the graph of $y = x$ down 2 units. Graph the translation and write an equation to represent the translation.

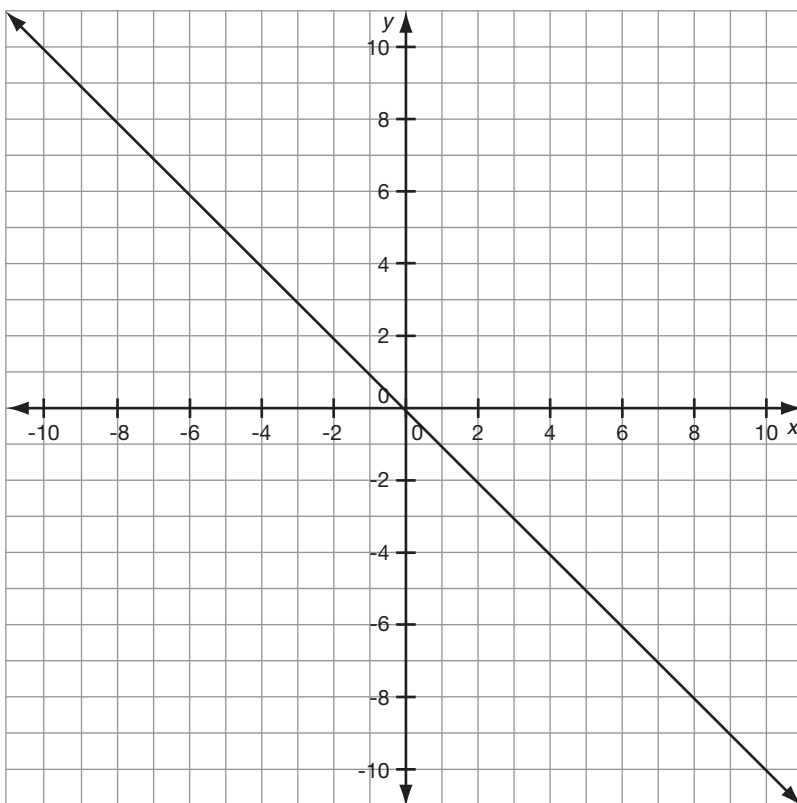

NAME _____ DATE _____

3. Translate the graph of $y = -x$ left 3 units. Graph the translation and write an equation to represent the translation.

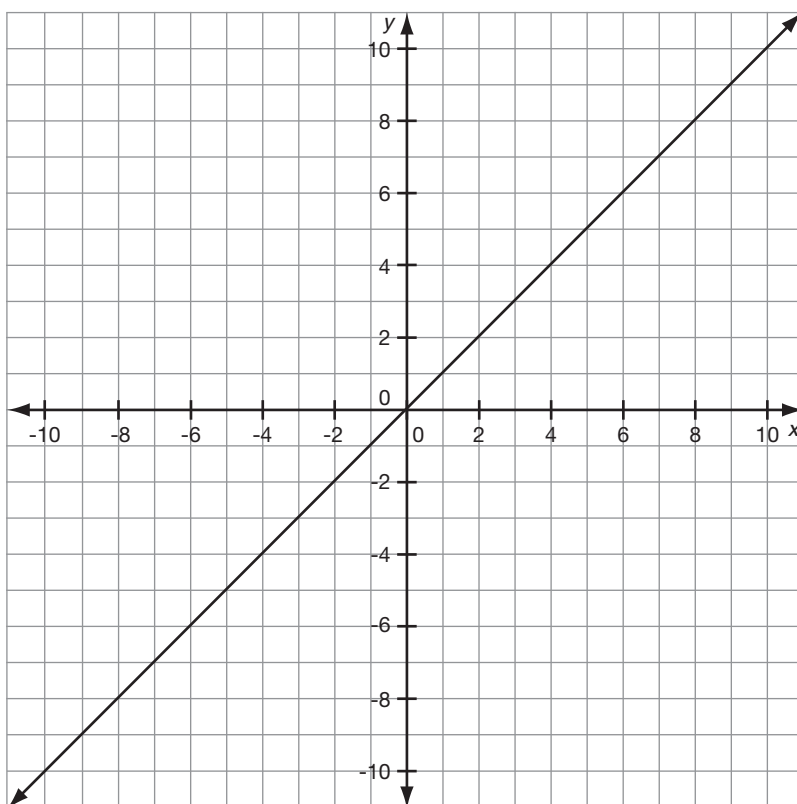

4. Translate the graph of $y = -x$ right 2 units. Graph the translation and write an equation to represent the translation.

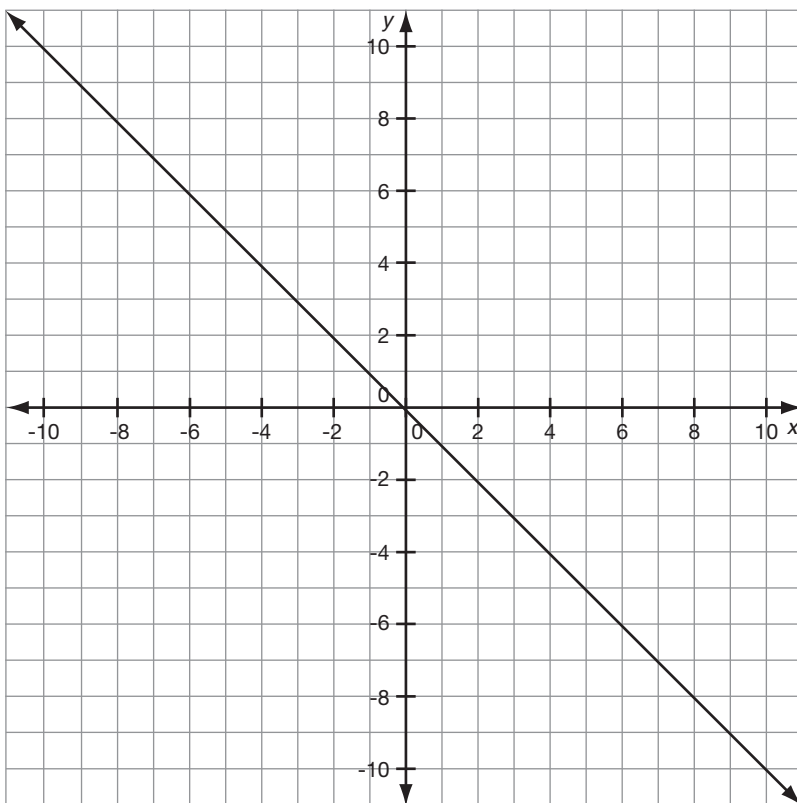

NAME _____ DATE _____

5. Translate the graph of $y = x$ left 5 units. Graph the translation and write an equation to represent the translation.

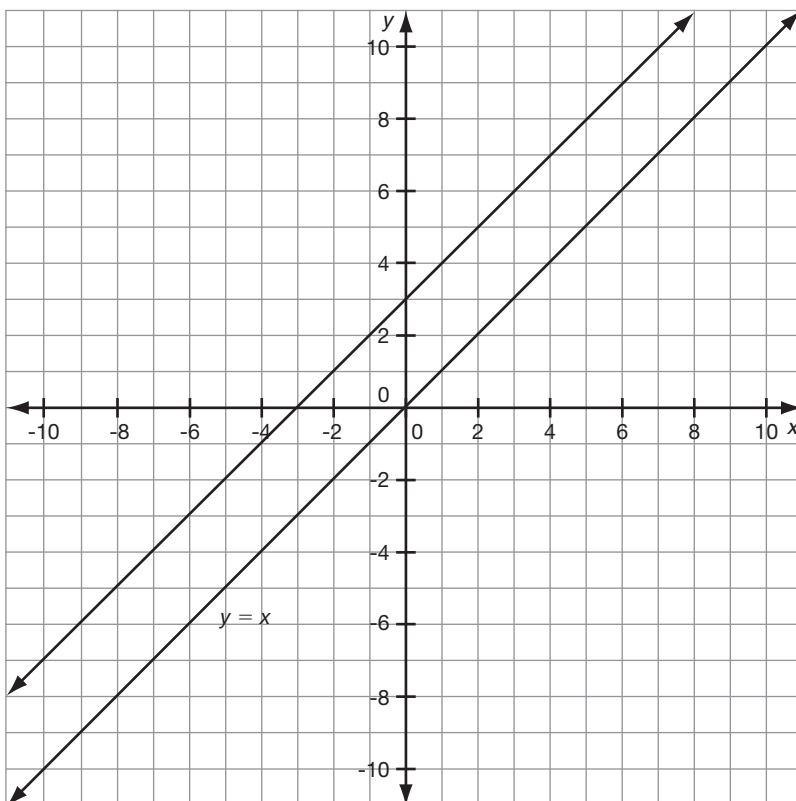

6. Translate the graph of $y = -x$ down 8 units. Graph the translation and write an equation to represent the translation.

NAME _____ DATE _____

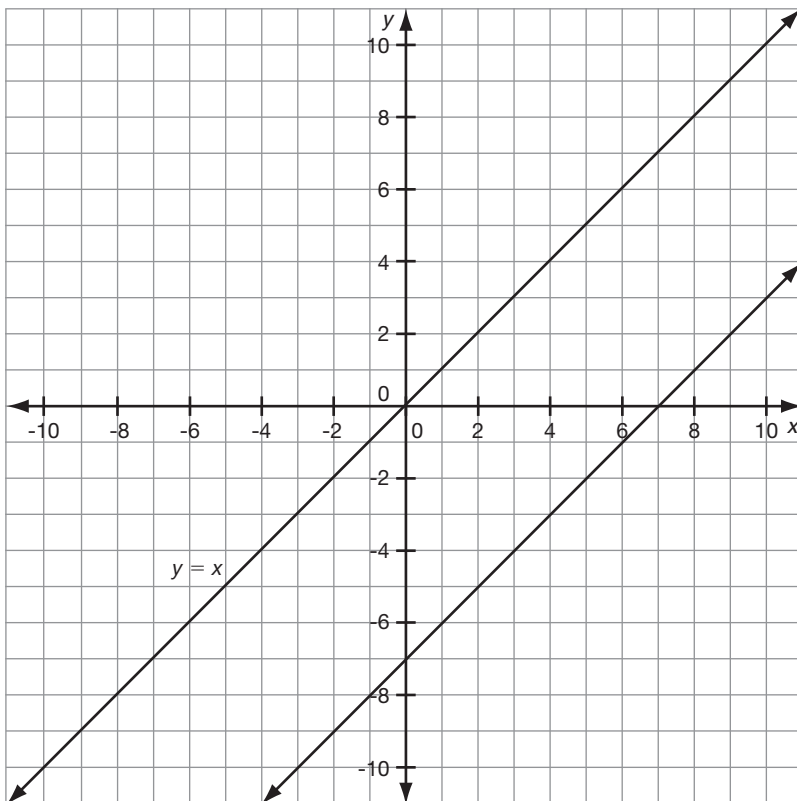

Describe each translation.

7. The graph shown is the result of a translation performed on the equation $y = x$.

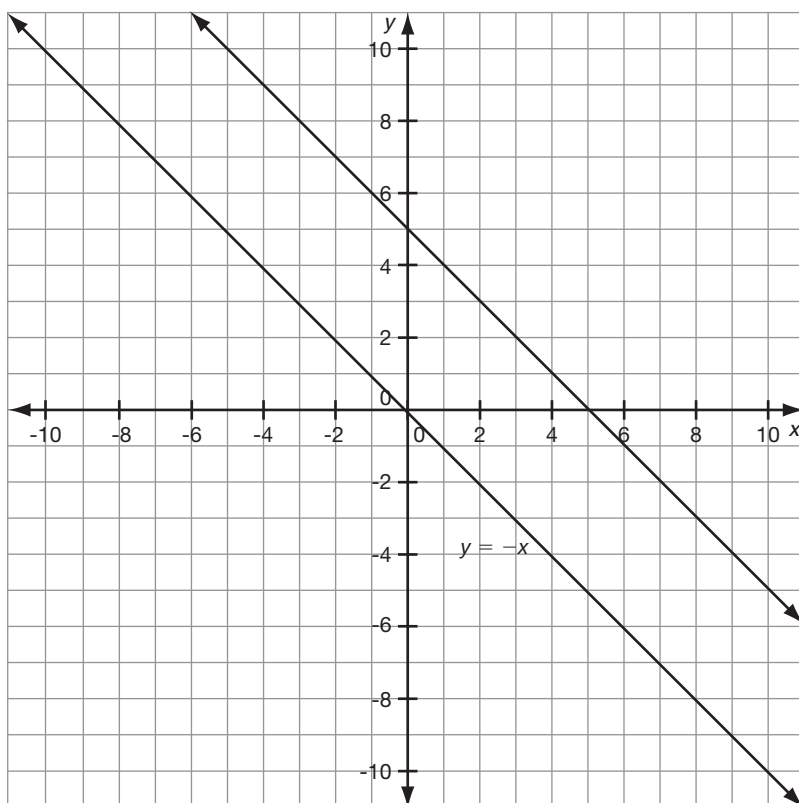

The translation is either a slide up 3 units or a slide left 3 units.

8. The graph shown is the result of a translation performed on the equation $y = x$.

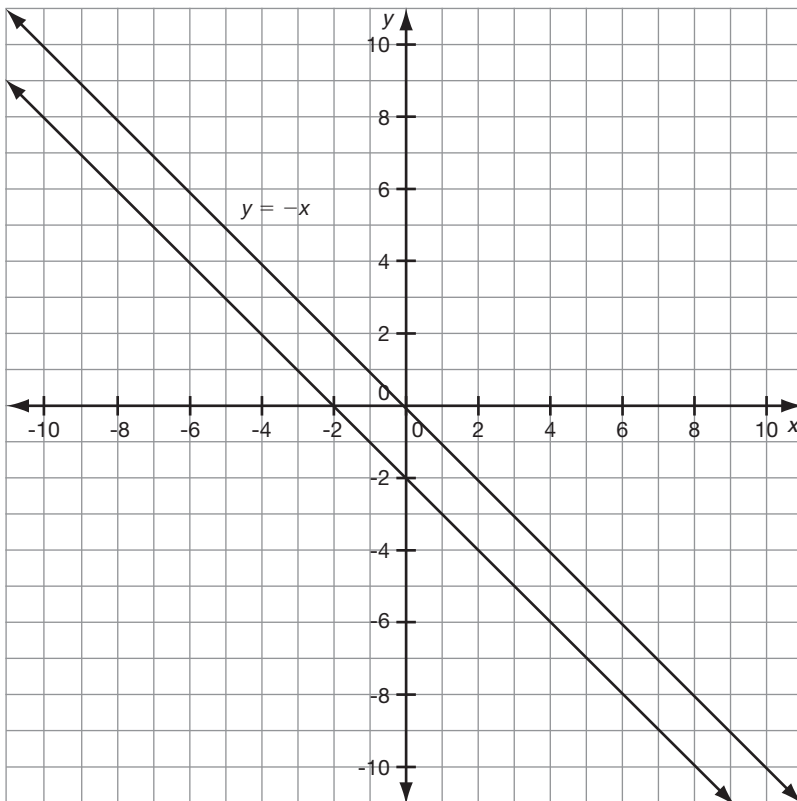

NAME _____ DATE _____

9. The graph shown is the result of a translation performed on the equation $y = -x$.

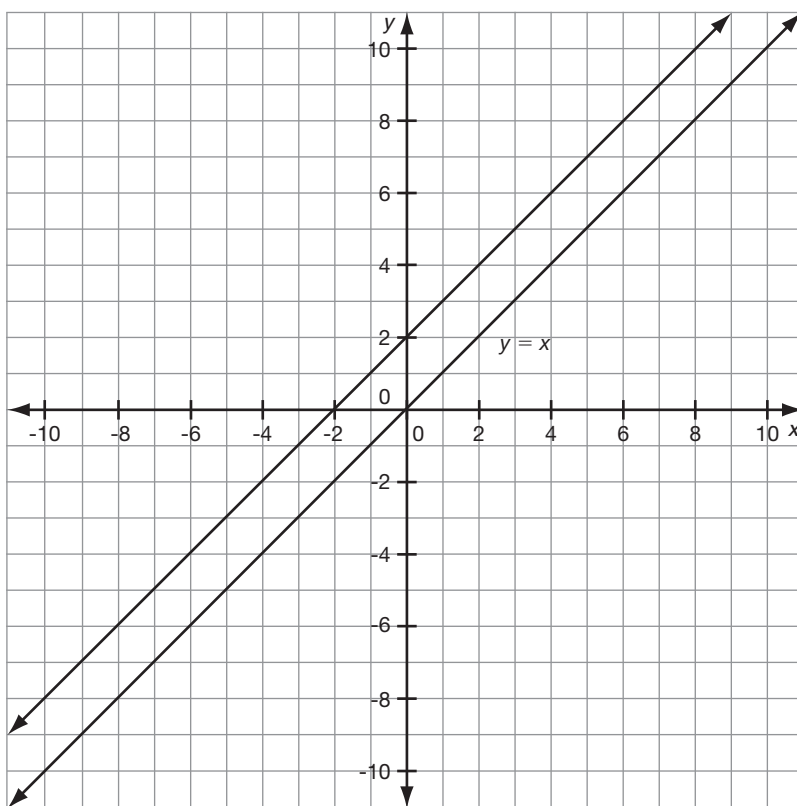

10. The graph shown is the result of a translation performed on the equation $y = -x$.

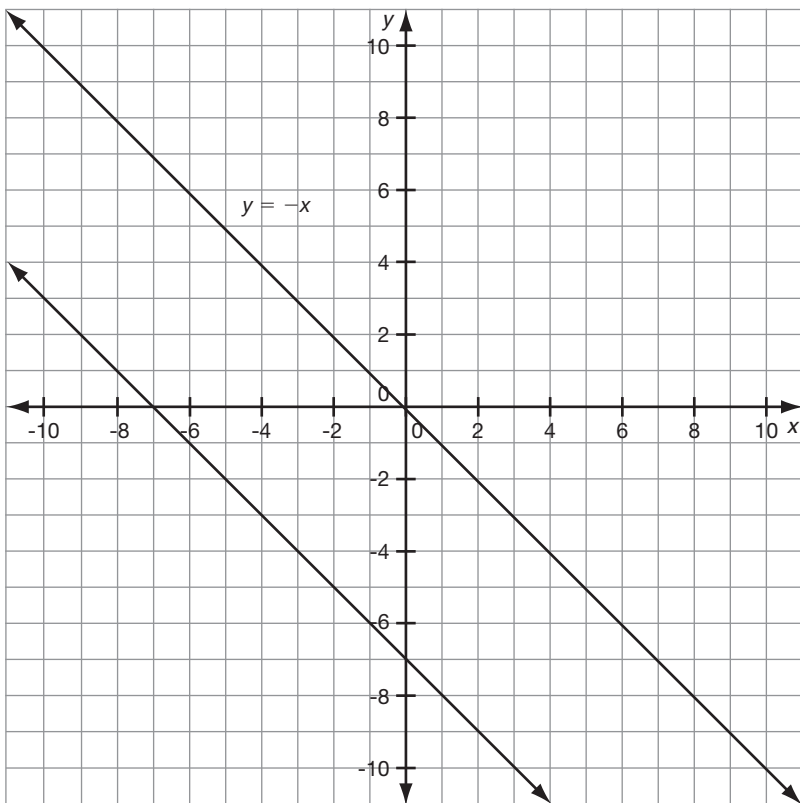

NAME _____ DATE _____

11. The graph shown is the result of a translation performed on the equation $y = x$.

18

12. The graph shown is the result of a translation performed on the equation $y = -x$.

NAME _____ **DATE** _____

Describe each translation.

13. The equation $y = x + 4.5$ is the result of a translation performed on the equation $y = x$.

The translation is either a slide up 4.5 units or a slide left 4.5 units.

14. The equation $y = -x + 2.1$ is the result of a translation performed on the equation $y = -x$.

15. The equation $y = x + 6.2$ is the result of a translation performed on the equation $y = x$.

18

16. The equation $y = -x - 12$ is the result of a translation performed on the equation $y = -x$.

17. The equation $y = x - 3.8$ is the result of a translation performed on the equation $y = x$.

18. The equation $y = -x - 1.5$ is the result of a translation performed on the equation $y = -x$.

Lesson 18.2 Skills Practice

NAME _____

Parallel or Perpendicular? Slopes of Parallel and Perpendicular Lines

Vocabulary

Define each term in your own words.

1. Reciprocal
2. Negative reciprocal

18

Problem Set

Determine the slope of a line parallel to the given line represented by each equation.

1. $y = 6x + 12$

The slope of the line is 6, so the
slope of a line parallel to it is 6.

2. $y = \frac{2}{3}x - 5$

3. $y = 8 - 5x$

4. $y = 14 - \frac{1}{4}x$

5. $3x + 4y = 24$

6. $15x - 5y = 40$

Identify the slope of the line represented by each equation to determine which equations represent parallel lines.

18

7. a. $y = 8x - 5$

slope = 8

b. $y = 7 - 8x$

slope = -8

c. $y = 4 + 8x$

slope = 8

The equations (a) and (c) represent parallel lines.

8. a. $y = 6 - 3x$

b. $y = -3x - 8$

c. $y = 3x + 10$

9. a. $5y = -20x - 45$

b. $2y = 4x + 6$

c. $4y = 32 - 16x$

NAME _____ DATE _____

10. a. $4y = 4x - 16$

b. $2y = 8 + 4x$

c. $3y = 6x + 18$

11. a. $3x + 5y = 60$

b. $6x + 10y = -40$

c. $15x + 9y = 18$

12. a. $-x + 8y = 24$

b. $-32x + 4y = 12$

c. $-40x + 5y = 10$

Determine the negative reciprocal of each number.

18

13. 5

$-\frac{1}{5}$

14. -7

15. $\frac{3}{4}$

16. $-\frac{5}{8}$

17. $\frac{1}{7}$

18. $-\frac{2}{5}$

NAME _____ DATE _____

Determine the slope of a line perpendicular to the given line represented by each equation.

19. $y = 13x + 22$

20. $y = 5x - 17$

The slope of the line is 13, so the slope
of a line perpendicular to it is $-\frac{1}{13}$.

21. $y = \frac{1}{6}x + 4$

22. $y = 9 - \frac{1}{3}x$

23. $5x + 6y = 36$

24. $4x - 3y = 21$

Identify the slope of the line represented by each equation to determine which equations represent perpendicular lines.

25. a. $y = \frac{2}{3}x - 8$

slope = $\frac{2}{3}$

b. $y = \frac{3}{2}x - 1$

slope = $\frac{3}{2}$

c. $y = -\frac{3}{2}x + 14$

slope = $-\frac{3}{2}$

The equations (a) and (c) represent perpendicular lines.

26. a. $y = -5x - 23$

b. $y = 18 + \frac{1}{5}x$

c. $y = 5x + 31$

27. a. $-6y = -4x + 12$

b. $2y = 3x + 8$

c. $-9y = 6x + 9$

NAME _____ DATE _____

28. a. $-5y = 25x + 55$

b. $5y = x + 15$

c. $4y = 20x - 24$

29. a. $-6x + 2y = 20$

b. $-9x - 3y = -18$

c. $x + 3y = 15$

30. a. $3x + 18y = -72$

b. $30x + 5y = 25$

c. $-2x + 12y = -24$

18

Determine whether the lines described by the equations are parallel, perpendicular, or neither.

31. $y = 5x + 8$

slope = 5

$y = 4 + 5x$

slope = 5

The slopes are equal, so the lines are parallel.

32. $y = 15 - 2x$

$y = \frac{1}{2}x + 17$

33. $y = \frac{1}{3}x + 5$

$y = 3x - 2$

NAME _____ **DATE** _____

34. $3x + 12y = 24$

$-20x + 5y = 40$

18

35. $3x + 2y = 2$

$2x + 3y = 3$

36. $10y = 6x + 80$

$-12x + 20y = 160$

Lesson 18.3 Skills Practice

NAME _____

DATE _____

Up, Down, and All Around Line Transformations

Vocabulary

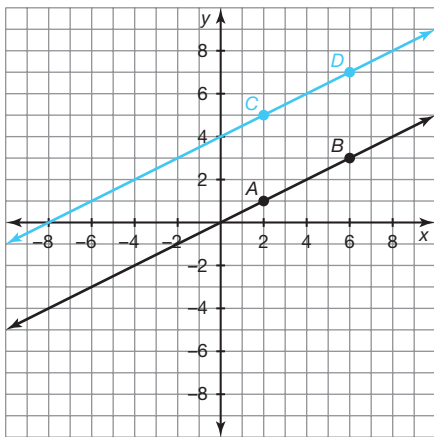

Write a definition for the term in your own words.

1. Triangle Sum Theorem

Problem Set

Sketch the translation for each line.

1. Vertically translate line AB 4 units to create line CD . Calculate the slope of each line to determine if the lines are parallel.

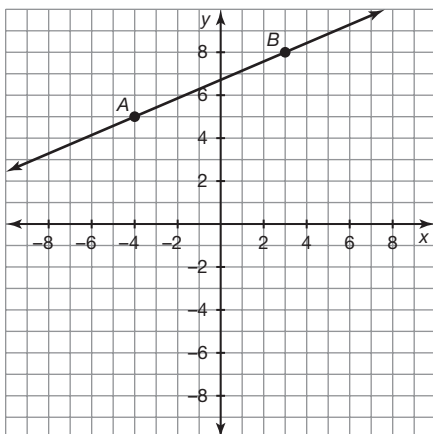

Line AB is parallel to line CD .

$$\begin{aligned}\text{line } AB: m &= \frac{y_2 - y_1}{x_2 - x_1} \\ &= \frac{3 - 1}{6 - 2} \\ &= \frac{2}{4}\end{aligned}$$

$$\begin{aligned}\text{line } CD: m &= \frac{y_2 - y_1}{x_2 - x_1} \\ &= \frac{7 - 5}{6 - 2} \\ &= \frac{2}{4}\end{aligned}$$

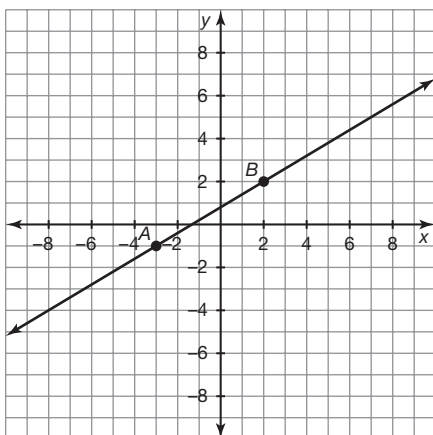

18

2. Vertically translate line AB -8 units to create line CD . Calculate the slope of each line to determine if the lines are parallel.

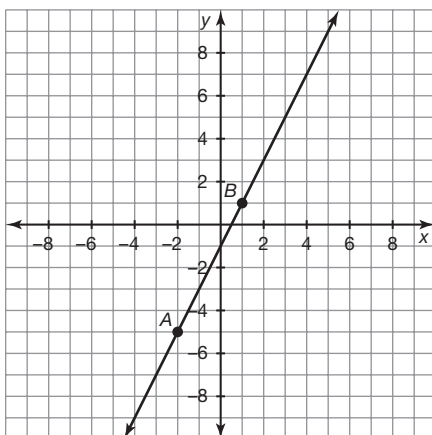

18

3. Horizontally translate line AB -5 units to create line CD . Calculate the slope of each line to determine if the lines are parallel.

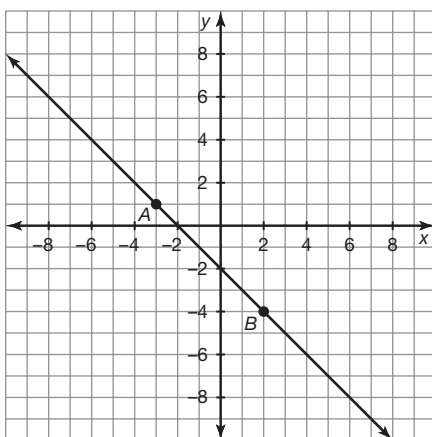

NAME _____ DATE _____

4. Horizontally translate line AB 6 units to create line CD . Calculate the slope of each line to determine if the lines are parallel.

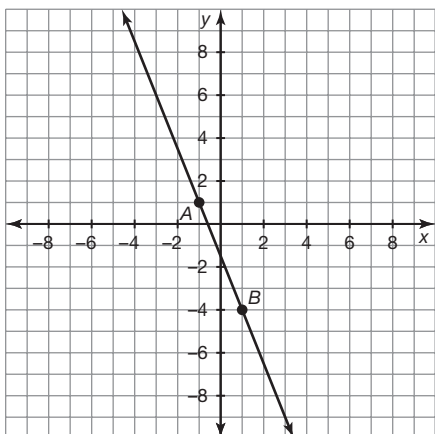

18

5. Vertically translate line AB 7 units to create line CD . Calculate the slope of each line to determine if the lines are parallel.

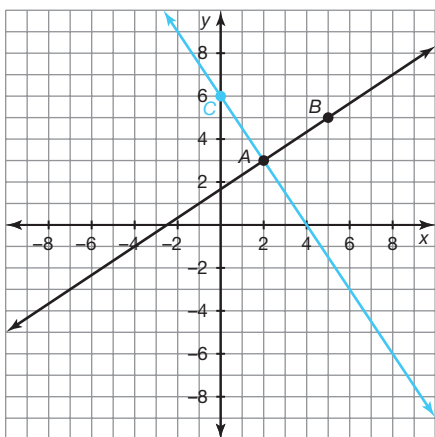

6. Horizontally translate line AB -3 units to create line CD . Calculate the slope of each line to determine if the lines are parallel.

18

Sketch the rotation for each line.

7. Use point A as the point of rotation and rotate line AB 90° counterclockwise to form line AC . Calculate the slope of each line to determine if the lines are perpendicular. Explain how you determined your answer.

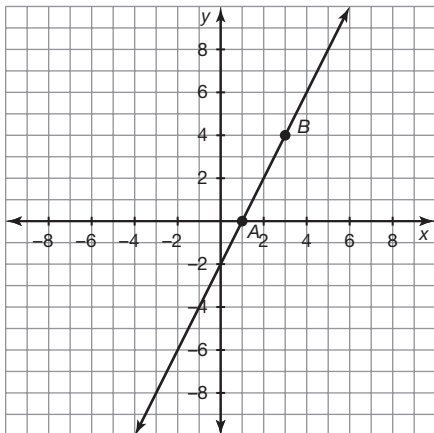

$$\begin{aligned}\text{line } AB: m &= \frac{y_2 - y_1}{x_2 - x_1} \\ &= \frac{5 - 3}{4 - 1} \\ &= \frac{2}{3}\end{aligned}$$

$$\begin{aligned}\text{line } AC: m &= \frac{y_2 - y_1}{x_2 - x_1} \\ &= \frac{6 - 3}{-1 - 1} \\ &= -\frac{3}{2}\end{aligned}$$

Line AB is perpendicular to line AC because the slopes are negative reciprocals of each other.

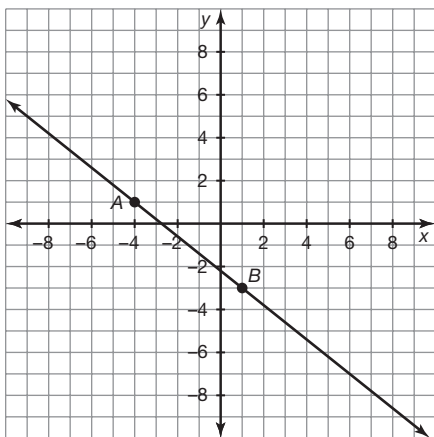

NAME _____ DATE _____

8. Use point B as the point of rotation and rotate line AB 90° clockwise to form line BC . Calculate the slope of each line to determine if the lines are perpendicular. Explain how you determined your answer.

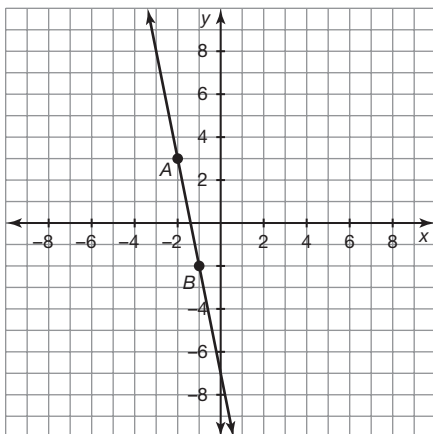

18

9. Use point A as the point of rotation and rotate line AB 90° counterclockwise to form line AC . Calculate the slope of each line to determine if the lines are perpendicular. Explain how you determined your answer.

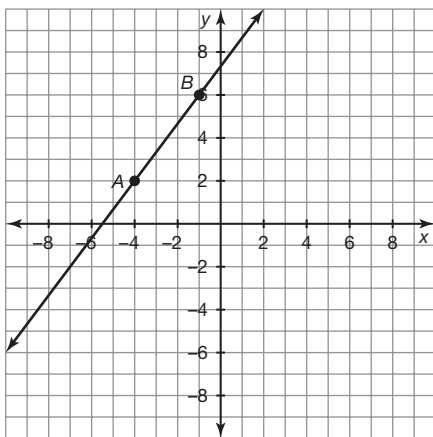

10. Use point B as the point of rotation and rotate line AB 90° clockwise to form line BC . Calculate the slope of each line to determine if the lines are perpendicular. Explain how you determined your answer.

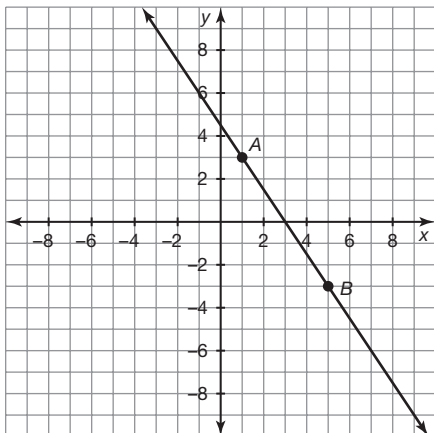

18

11. Use point A as the point of rotation and rotate line AB 90° clockwise to form line AC . Calculate the slope of each line to determine if the lines are perpendicular. Explain how you determined your answer.

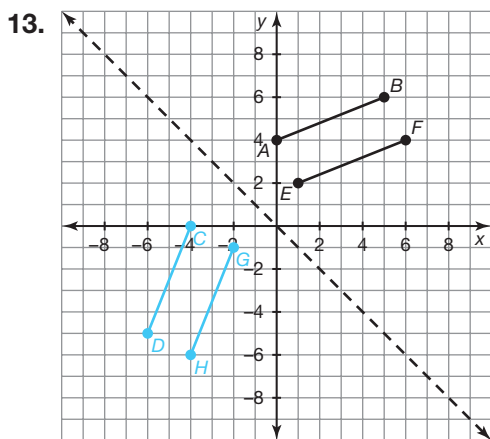

NAME _____ DATE _____

12. Use point B as the point of rotation and rotate line AB 90° counterclockwise to form line BC . Calculate the slope of each line to determine if the lines are perpendicular. Explain how you determined your answer.

18

Reflect line segment AB over the reflection line to form line segment CD . Reflect line segment EF over the reflection line to form line segment GH . Calculate the slopes of all line segments to prove that the line segments are parallel.

$$\text{slope of } \overline{AB} = \frac{2}{5}$$

$$\text{slope of } \overline{EF} = \frac{2}{5}$$

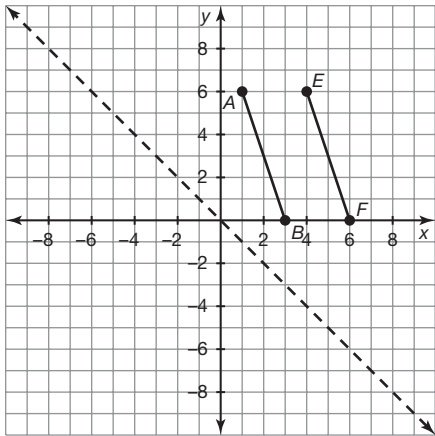

$$\overline{AB} \parallel \overline{EF}$$

$$\text{slope of } \overline{CD} = \frac{5}{2}$$

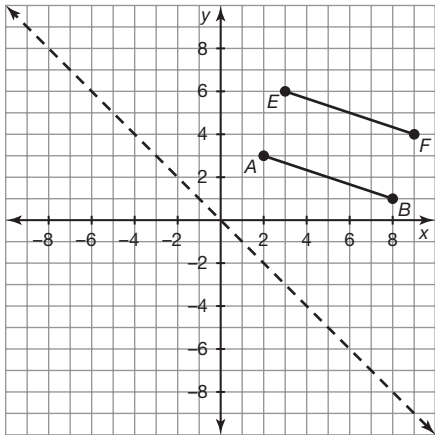

$$\text{slope of } \overline{GH} = \frac{5}{2}$$

$$\overline{CD} \parallel \overline{GH}$$

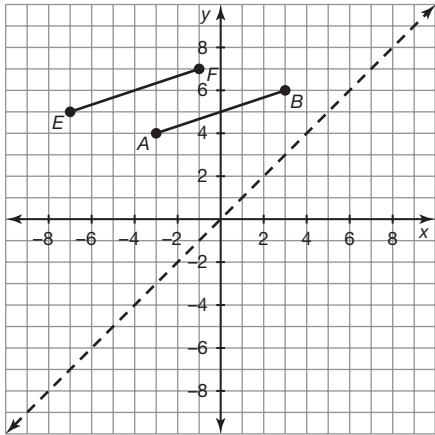

14.

15.

Back on the Grid Similar Triangles on the Coordinate Plane

Problem Set

Verify that the triangles in each are similar.

- Triangle DEF is the image that resulted from a dilation of $\triangle ABC$. Use the SAS Similarity Theorem to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

Corresponding Sides \overline{AB} and \overline{DE} :

$$AB = 2$$

$$DE = 4$$

$$\frac{DE}{AB} = \frac{4}{2}$$

$$= 2$$

Corresponding Sides \overline{AC} and \overline{DF} :

$$AC = 4$$

$$DF = 8$$

$$\frac{DF}{AC} = \frac{8}{4}$$

$$= 2$$

$$\frac{DE}{AB} = \frac{DF}{AC} = 2$$

Corresponding Angles $\angle A$ and $\angle D$:

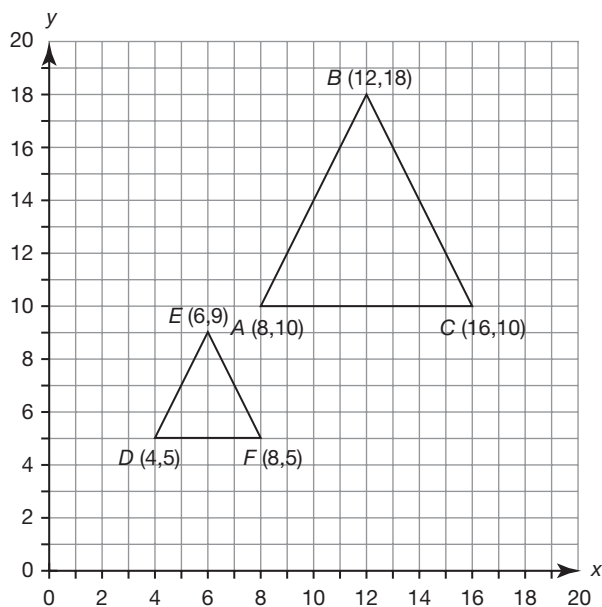

Angle A and $\angle D$ are both right angles.

The measures of $\angle A$ and $\angle D$ are equal.

The two triangles are similar by the SAS Similarity Theorem.

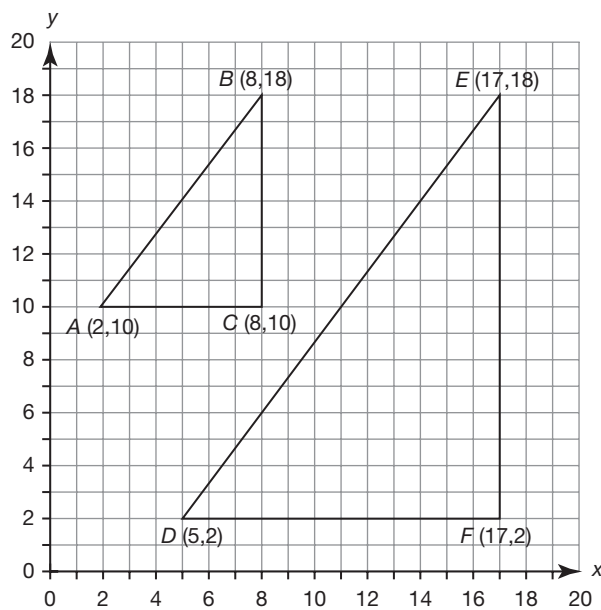

18

2. Triangle DEF is the image that resulted from a dilation of $\triangle ABC$. Use the SAS Similarity Theorem and a protractor to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

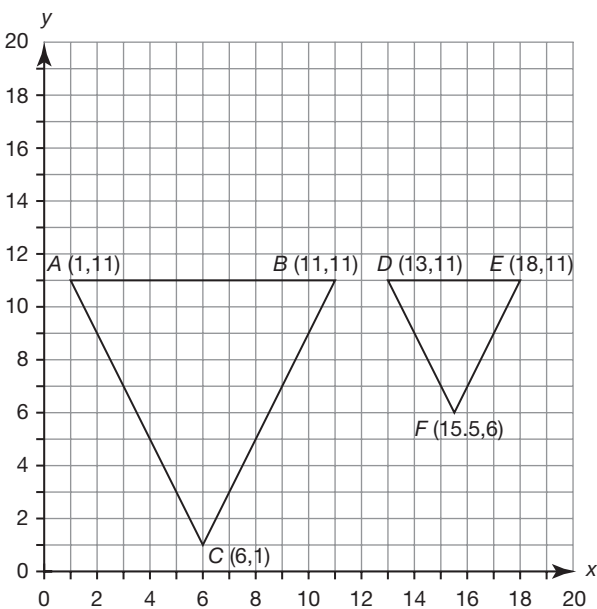

NAME _____ DATE _____

3. Triangle DEF is the image that resulted from a dilation of $\triangle ABC$. Use the SSS Similarity Theorem to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

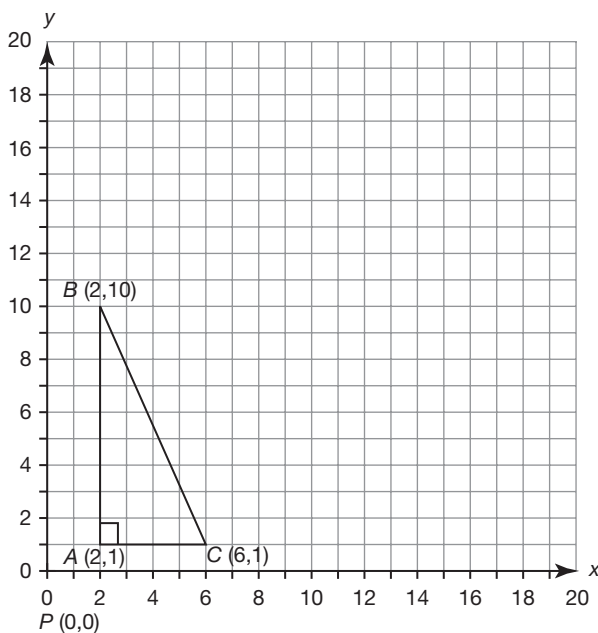

4. Triangle DEF is the image that resulted from a dilation of $\triangle ABC$. Use the SSS Similarity Theorem to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

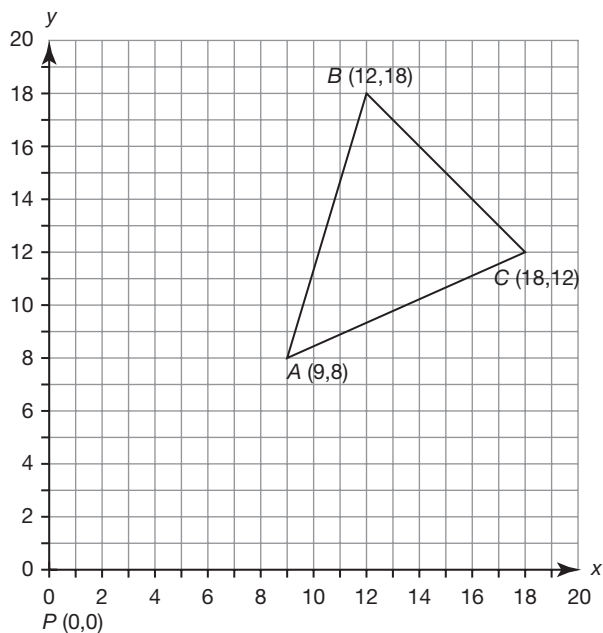

NAME _____ DATE _____

5. Dilate $\triangle ABC$ to form $\triangle DEF$ using point $P(0, 0)$ as the center of dilation and a scale factor of 2.
Use the AA Similarity Theorem and a protractor to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

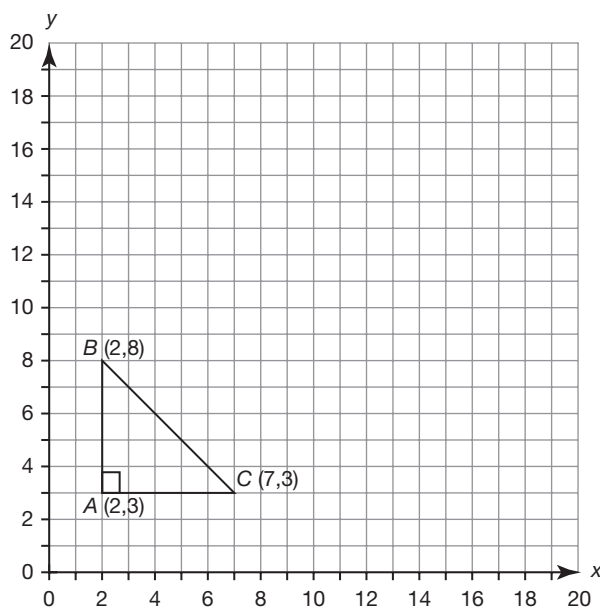

6. Dilate $\triangle ABC$ to form $\triangle DEF$ using point $P(0, 0)$ as the center of dilation and a scale factor of $\frac{1}{2}$.
Use the AA Similarity Theorem and a protractor to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

NAME _____ DATE _____

7. Dilate $\triangle ABC$ to form $\triangle DEF$ using point $A(2, 3)$ as the center of dilation and a scale factor of 3. Use the SAS Similarity Theorem to determine whether $\triangle ABC$ is similar to $\triangle DEF$.

8. Dilate $\triangle ABC$ to form $\triangle DEF$ using point $A(0, 2)$ as the center of dilation and a scale factor of $\frac{1}{3}$. Use the SAS Similarity Theorem to determine whether $\triangle ABC$ is similar to $\triangle DEF$.
